

# Singapore Sports Hub

**DESCRIPTION:** Traditionally, athletics stadia do not have the flexibility to cater for more trackside sports such as football which limits their use. A prime example being the London 2012 stadium.

For the Singapore Sports Hub, Serapid has provided the flexibility needed by lifting a series of concrete concourse sections with differing shapes and weights which are revealed when the lower sections are moved forward over the running track. The sections are 9 metres from the storage position facilitating an additional tier of seating.

## Main Technical Characteristics

Static (kg): 110,000

Surface (m<sup>2</sup>): 54.18

Stroke (m): 9.3

Dynamic (kg): 110,000

Speed (mm/s): 50

Chain type: LinkLift 100R
